Technical Support Specialist Interview Questions

Can you describe a time when you had to explain a complex technical issue to a non-technical person?

How to Answer

This question tests your ability to communicate complex information in a simple, understandable manner. Focus on a real-life example where you helped a non-technical person understand a technical issue. Explain the situation, your approach, and the outcome. Emphasize your patience, ability to adjust your communication style, and problem-solving skills.

Sample Answer

At my previous job, one of our clients was having trouble understanding why their website was not functioning correctly. I took the time to explain that their website was experiencing a Denial of Service attack, which was causing it to crash. I used the analogy of a highway traffic jam to help them understand. I explained that like a road can only handle so many cars, their website could only handle so many visitors. The 'attack' was like millions of cars trying to get on the highway at once, causing a jam. They appreciated the explanation and gave us the go-ahead to implement security measures to mitigate the issue.
